

# New Swiss Aggregation Switch

## Overview

In Q1 2025, Asterfusion introduced an impressive portfolio of six new Layer 3 aggregation and core switches, each powered by their innovative Enterprise SONiC-based operating system. Engineered for high performance, scalability, and adaptability, these switches are set to redefine networking for. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. The GWN7830 Series of Layer 3 Aggregation Network Switches offers 3 model options, with up to 24 SFP ports and 12 SFP+ ports, which are ideal for medium-to-large businesses and enterprises that require high-performance networks with maximum capacity and control. For this reason, we've delivered a data center-influenced standalone OLT architecture paired with non-blocking leaf-spine fabric and aggregation switching. Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink.
