

# New energy-efficient communication station for campus network use

## Overview

This solution features simplified architecture, energy efficiency, and always-on services, helping enterprises build a high-quality campus network. In this. It is necessary to put this development on a resource-conserving and energy-saving basis to analyze the ecological impact of the telecommunications infrastructure of wireless radio networks and optical aggregation and transport networks. Backed by the Smart Networks and Services Joint Undertaking (SNS JU) under the. AI, AR/VR, and IoT devices are already on college campuses—in classrooms, dorm rooms, the library, faculty offices, and more. In the coming years, usage will only increase. In EAB's Campus 2030: Envisioning Tomorrow's Multi-Modal Campus infographic, they report that 82% of institutions plan to. Non-Terrestrial Networks (NTNs) integrated into 5G and potential 6G systems are emerging as a transformative solution for achieving ubiquitous connectivity across remote, underserved, and disaster-prone regions.
