

OPPC Junction Box Principle

Overview

Optical Phase Conductor (OPPC) Joint Boxes are designed to connect two OPPC fibre optic cables. They can be connected to a hanging insulator at suspension towers or in the loop between two insulators at. umber of over-head line applications for the transmission of information. It is erected as an ordinary phase line in the power transmission line, which can avoid fatal problems such as strand breakage and fiber breakage caused by OPGW being struck by. The ADSS/OPGW metal junction box is also called a splicing box that is designed to house the fiber core splices to the outdoor intermediate optical cable leading to the patch panel in the control room. OPGW) Rax Industry fiber optic cable. During the engineering application of OPPC, the optical fibre unit needs to be separated from the phase conductor; this will come down to optical fibre splicing and Photoelectricity isolation technology. The OPPC cable is mainly used in suburban and rural.
