

Optical module exceeded expectations

Overview

Exponential Demand Growth: Shipments of 400G and 800G modules exceeded 20 million units in 2024, generating nearly \$9 billion in revenue. as of 11:04 on February 29, 2024, the China securities electronic 50 index (931461) rose 3. 93 percent, Fudan micro power (688385) rose 15. 88 percent, zhenhua technology (000733), shengmei Shanghai. With 400G modules now the baseline, 800G adoption is surging—especially across AI and hyperscaler environments—while 1. 6T modules edge closer to reality. This article unpacks the technologies powering this leap (silicon photonics, advanced modulation, and co-packaged optics), compares deployment. The growth in demand for computing power driven by AI continues unabated. During the National Day holiday, the mutual investment among American tech. Optical component suppliers Coherent Corp. and Lumentum, despite beating revenue and EPS expectations, saw significant stock price declines. This sell-off is attributed to excessively high market expectations and stretched valuations, with current performance insufficient to justify current stock. China optical module stocks diverged as Zhongji Innolight beat expectations while TFC Communication and Eoptolink fell after 2026 Q1 results. China's optical module rally is splitting after 2025 annual reports and 2026 first-quarter results showed a sharp divide between companies still beating. Data centers will keep dominating optical module demand as AI and cloud drive revenue growth through 2030. Optical module demand is being pulled in two directions at once, faster bandwidth for dense networks and tighter constraints on power, security, and lead times. With global R&D projected to.
