

PoE router connected to switch

Overview

Standard connection: Use one Ethernet cable, with one end plugged into the LAN port of the router and the other end plugged into any regular data port of the PoE switch (non Uplink port, some switches have dedicated Uplink ports for cascading, not used here). We can use TL-POE150S and TL-POE10R to expand the network for the place where power line can not reach or there is no outlet. In the topology shown as above, both TL-POE10R and the device which connect to it do not need external power adapter, the TL-POE150S can provide power supply and data for. The correct connection between PoE switches and routers is a key step in building a stable and efficient network. However, to take full advantage of a PoE switch, it's crucial to understand how to use it properly. In this blog, we will guide you through the key steps to ensure a successful PoE. In this video, we dive into how to use the TP-Link TL-POE10R POE Splitter to supply power and LAN connectivity to a WiFi router, modem, or access point from a CCTV system POE switch. This device simplifies your network setup by delivering both pow. The article lists three methods for your reference to connect these devices.
