

Power Consumption of 48-Port Core Switch

Overview

The first four ports deliver up to 90W PoE++, compatible with IEEE 802.3af/at/bt, while Ports 5-48 provide robust 30W support. The Cisco Catalyst 1000 Series switches are fixed-configuration, Gigabit Ethernet switches that provide entry-level enterprise-class Layer 2 access for branch offices, conventional workspace, and out-of-wiring closet applications. Cisco Catalyst 1000 Series switches provide support for the. What is the power budget of a 48-port PoE switch, and how many devices can it support?

The power budget of a 48-port PoE switch is the total amount of Power over Ethernet (PoE) it can supply across all its ports to power connected devices like IP cameras, VoIP phones, or wireless access points. How. Layer 2, PoE switch with (48) GbE, PoE+ and 24V passive PoE RJ45 ports, (2) 1G SFP ports, and (2) 10G SFP+ ports. When discussing the power consumption of a Cisco 48-port switch, it's important to understand that power requirements can vary significantly based on the model and the features it supports.
