

Precautions when coiling fiber tail

Overview

Because fibers are sensitive to moisture, the cable end should be covered with an end cap, heavy tape or equivalent at all times. The let-off reel must never be left unattended during a pull because excess or difficult pulls, center-pull or backfeeding techniques may be employed. The. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. When you cut these cables, tiny glass shards can fly about. During the welding process, the "V" groove, electrode, objective lens, welding chamber, etc. The success rate of optical fiber splicing is very important, because once the. Introduction This Program provides supervision, employees and safety managers with general safety rules, task safety procedures and best techniques for installation of quality fiber optic cable systems (cable handling, splicing, pulling, terminating testing and trouble shooting tasks).
