

Production workshop for optical modules

Overview

The precision optics workshop is part of the NanoBiophotonics department, but also offers support for the other groups in the house. Among other things, we also adapt commercially. Optica Individual Industry Member programming offers a tailored experience for professionals within the optics and photonics community. Participants gain exclusive access to cutting-edge research, industry insights, and collaborative opportunities. All production personnel has undergone professional training, and the quality inspection. The company officially put a new production workshop into operation at its Guangming facility, expanding its existing manufacturing capacity through a more efficient and integrated production layout. Rather than building a completely new site, the expansion focuses on optimizing the current. Today, the editor from LSOLINK will take everyone through the production process of optical modules, from raw materials to finished products, to satisfy your curiosity. Experts from a wide range of disciplines and companies will contribute their expertise to this workshop. Tight tolerances and positional accuracies.
