

Relay protection test overcurrent protection return time

Overview

Calculate pickup values, timing curves, coordination time intervals (CTI), and test injection currents for overcurrent (50/51), differential (87), distance (21), and directional (67) protective relays. Essential tool for relay technicians, protection . An overcurrent relay protects electrical circuits from excessive current by tripping before equipment suffers damage. To keep this protection reliable, you must test the relay using a structured and repeatable method. A well-defined overcurrent relay testing procedure ensures that pickup settings. Finally the Overcurrent test module is used to perform the tests that are needed for the directional overcurrent protection function. (referred to in this document). This is used to clear high-level faults very quickly. Definite Time Overcurrent (50 with time.
