

Requirements for incoming and outgoing lines of electrical distribution boxes at construction sites

Overview

Rubber insulated cables shall be used for the incoming and outgoing lines, and the incoming and outgoing ports shall be set at the lower end face of the box body, with protective rings added. The best distribution system is one that will, cost-effectively and safely, supply adequate electric service to both present and future probable loads—this section is intended to aid in selecting, designing and installing such a system. The function of the electric power distribution system in a. 1□ The manufacture and installation of distribution box and switch box shall meet the following requirements: 1. The distribution box shall be made of iron plate or other fire-proof insulating materials to achieve ventilation, heat dissipation, rain proof and fire-proof. We will briefly explain what they are and how they are used, as well as which types of distribution.
