

Requirements for sealing cable shafts and cable trays

Overview

Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with design requirements. An electrical shaft shall have a threshold. Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when. us-trations without notice. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The Promat construction are partly system protected. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support. the roxtec sealing system for cables and pipes protects against fire – but also against gas, water, and several other risk factors. our solutions are easy to use and help you ensure safety, efficiency and operational reliability through all phases of your construction project.
