

Single-fiber optical module quality inspection

Overview

On-site quality control begins with the incoming goods inspection and includes systematic verification steps throughout the entire installation. The modular structure enables step-by-step quality assurance of fiber optic systems and early fault detection. Industry's first AI-driven endface analysis for simplex, duplex and multi-fiber connectors. Delivers reliable and repeatable results with a self-contained, fully automated tool for zero-button testing all day—no need to recharge batteries or offload results. Corning recommends that all fiber optic systems be tested to a minimum set. Fiber optic cable is a type of cabling that contains one or more optical fibers for transmitting data at high speeds and/or over long distances using light. The primary reason for fiber inspection is to ensure that the connectors are free of any defects, damage, or debris that would prevent sufficient transmission of light when mated. To assure that the link will be correctly installed, Rosenberger supply the correct equipment for inspecting, cleaning and testing the fiber optic link. Simply connect the fiber optic connector to the microscope.
