

# Solution for large-scale fiber optic cable entry into the data center

## Overview

Instead of digging new trenches for additional capacity, these data centers can maximize their conduit with flexible high-fiber count optic cabling that pack hundreds of fiber strands into small-diameter cables. These new solutions are well suited to handle growing future bandwidth. Molex provides modular trunks, expanded beam technology and easy-to-service designs that maximize bandwidth per rack unit while simplifying upgrades and troubleshooting. Data centers are driving higher data rates into racks where space is already limited. AFL can supply every piece of the puzzle, providing control over quality, reliability and performance. The data superhighway paved by fiber optics forms the backbone of modern data centers, ensuring rapid. As AI, cloud computing, and big data reshape the digital landscape, data centers face growing demands for faster, more reliable, and scalable connectivity. Traditional copper cabling is no longer sufficient to meet these evolving requirements. Master data center fiber optic implementation with detailed technical specifications, installation procedures, and optimization strategies.
