

South African EPON equipment 400G

Overview

MTN Group and NEC Corporation have announced the successful deployment of a 400G optical transponder solution, Phoenix, with both companies claiming it to be Africa's first. This initiative marks a significant milestone for the telecommunications industry in Africa, with the potential to revolutionise the way optical networks are. These Terms and Conditions ('the Terms') govern your use of the website on the Internet located at www.com ('the Site') and are legally binding on you. The Site is owned and operated by Developing Telecoms Limited ('the Owner', 'we', 'us', 'our'). Please read the Terms before. A Passive Optical Network (PON) is a telecommunications technology used to provide fibre optic internet to multiple end users through a single fibre line. Unlike traditional point-to-point fibre, PON uses passive splitters to deliver signals to multiple subscribers, reducing the cost of fibre. This EPON OLT transceiver module has been designed for low cost point-to-multipoint (PtMP) Fibre to the Home, Business or Curb (FTTx) solutions, employing high-speed burst modes in 1250 Mbps symmetrical duplex data links.
