

Stainless steel distribution box power distribution

Overview

The stainless steel enclosure box is a wall-mounting distribution board. The panel board is designed and assembled to achieve multiple control functions. The enclosure is made of 201, 304 or 316 stainless steel. Its protection degree can reach IP55 or IP66. From cost-effective indoor solutions to corrosion-resistant options for harsh environments, our range ensures durability and reliability across diverse applications. Can be equipped with pre-wired socket strips (SCHUKO, CEE 16A 5 p 400V, CEE 16A 3 p 230V). Following the main circuit. Electrical enclosures play a decisive role in protecting power distribution and control systems, yet many standard enclosures fail when exposed to harsh industrial conditions such as moisture, corrosive chemicals, frequent washdowns, or mechanical impact.
