

Standard Requirements for the Frequency of Electrical Distribution Box Inspections

Overview

The SFG20 44-07 standard requires specific 6-monthly checks that include visual inspections for physical damage, verification of proper labelling, checking protective devices, identifying overheating issues, and ensuring overall functionality of distribution boards. The IET Wiring Regulations does not provide requirements for specific qualifications for electricians, and the IET cannot advise the exact qualifications which are required. Carrying out an inspection of electrical installations is a complex task, the person carrying out the inspection and testing. The table below provides guidance on the frequency of formal inspections of electrical installations as well as routine checks. (Table extracted from BS7671 IET Wiring Regulations 18th Edition: 2018). For further Information, please do not hesitate to. Maintaining portable and transportable electrical equipment. Premier Technical Services Group Ltd (PTSG) has identified a significant compliance gap affecting many facilities management companies and building operators across the UK. The issue concerns SFG20 44-07 requirements for distribution board maintenance, which are often overlooked in standard. EX inspections verify that every junction box, light or motor installed in Zones 0-2 / 20-22 still meets its ATEX / IECEx protection rating.
