

Standard distribution box incoming line

Overview

1) Generally, the incoming line of power distribution box adopts five wire system, i. three phase lines a, B and C (generally yellow, green and red), one zero line (light blue) and one ground line (yellow with green stripes). That cable running from your main service entrance to your distribution box isn't just another wire - it's the critical link that determines how safely and efficiently power flows through your entire building. It involves the placement of breakers, contactors, busbars, terminals, protective devices, and wiring in a structured and safe. mm (minimum) in length on cable connection side as shown in the drawings. Ga Porcelain Cutouts in 160 KVA / 315 KVA box to protect outgoing circuits. ① 220V load generally takes one phase line.
