

Steel cable tray thickness error

Overview

Ignoring thickness is one of the most common causes of tray deflection and field failures. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. However, if cable tray is not properly designed to be compatible with its application and environment, electrical system failures can occur. Our Cable Tray Design Considerations Guide. All trays must undergo salt spray tests and coating thickness tests to ensure the coatings meet the durability levels required under the IEC standard for cable tray. Know more about Demand Factor as Per NEC IEC 61537 considers environmental exposure in defining tray performance. Some of the. of galvanized products is a linear function of the thickness of the zinc coating. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support.
