

Switch in the power distribution box of the mixing plant

Overview

The main power switch usually located in the distribution cabinet, it is used to control the main power on or off, for facilitate operation and promptly cutting off power in case of emergency electrical failure. Electrical connection of concrete batching plant is a crucial and complex process that involves the collaborative work of multiple electrical components and systems. A feeder usually begins with a feeder breaker at the distribution substation. Many feeders leave substation in a concrete ducts and are routed to a nearby pole. A short quiz. The distribution box is an electrical equipment with the characteristics of small size, easy installation, special technical performance, fixed position, unique configuration function, no site restrictions, widespread application, stable and reliable operation, high space utilization rate, small.
