

The main distribution cabinet is the primary distribution box

Overview

The primary distribution box refers to the main distribution box, typically located in the distribution room. They also include metering systems, ensuring. The outgoing line from the low-voltage end of the transformer is 0.4kV to the distribution cabinet (primary distribution cabinet), then the outgoing line is led to the distribution box (secondary distribution box) in each building, and finally the outgoing line is led to the distribution cabinet. The terms primary, secondary, and tertiary distribution boxes are relative. Let's make an example for clarity: A newly constructed residential area introduces a 10kV power line to a substation. From the transformer's low-voltage side (0.4kV), it is specially designed for the special situation of the project construction site and meets the relevant construction power specifications and standards of the. The distribution box (DB box) helps safely and efficiently distribute electrical power.
