

# The outer casing of the distribution box is slightly yellow

## Overview

The main reason would be oxidation, be it from exposure to UV rays, heat, or even sulfurization from air pollutants. It is easy to understand why the outer shell of electrical appliances turns yellow. There shall be no significant color difference and reflection at. The new RBO (risk based oversight) instead uses an algorithm based on several factors including the contractor's deficiency rate and the scope of the permit (an EV charger install for whatever reason is an automatic inspection but an underground installation or rough in doesn't always warrant a. With that in mind, here are five key indicators that a distribution box might be nearing the end of its working life. Visible wear and tear on the casing A power distribution box's casing does far more than simply hold everything together; it's the first line of defence against impact, moisture. The standard colors used for electrical wires in most homes are black, red, blue, yellow, white, gray, green, and sometimes bare copper wires. These wires all have a different function in each circuit.
