

Three-level standardized distribution box

Overview

Three level distribution box: a distribution box is set under the main distribution box, a switch box is set under the distribution box, and electrical equipment is set under the switch box to form a three-level distribution box. It is specially designed for the special situation of the project construction site and meets the relevant construction power specifications and standards of the. To meet all specifications (practices, speed of implementation, ease of maintenance, continuity of service, etc.), Legrand offers three types of solutions: “Standard” distribution, “Optimised” distribution and “Increased Safety” distribution. After stepping down the voltage through the transformer's low-voltage side (0. These boxes feature bottom entry and exit cables, front-opening doors, and main busbars connected with copper strips for optimal contact.
