

Tray-type optical splitter dimensions

Overview

The overall dimensions of the tray are 158 x 85 x 9mm and the maximum splice capacity of 24 fibres is based on 24 double stacked heatshrink 3A splice protectors up to 60mm long. According to customer requirements, it can be a ribbon fiber output or a dispersion fiber output. Introduction Micro-splitter is stronger of fiber circuit protection than bare fiber splitter, which is a miniaturization result of. The 1xN PLC Fiber Splitter Tray Type is a rack-mountable passive optical device designed for easy integration into standard optical distribution frames. Based on Planar Lightwave Circuit (PLC) technology, it ensures stable performance, low loss, and precise signal distribution from a single input. It is used in Passive Optical Networks. These rugged enclosures are offered in a variety of configurations making them ideal to be mounted in centralized splitting locations close to the Optical Line Terminal (OLT) or remote splitting locations nearer the Optical Network Unit (ONU). • Compact trays are 5 mm in height and occupy one slot in the fiber organizer.
