

What is a mobile three-level distribution box

Overview

Third level distribution box: refers to the final junction box of each electrical appliance, which can be movable and fixed. After stepping down the voltage through the transformer's low-voltage side (0. Electrical equipment is installed under the switch box, forming a three-level distribution. These boxes feature bottom entry and exit cables, front-opening doors, and main busbars connected with copper strips for optimal contact. It is specially designed for the special situation of the project construction site and meets the relevant construction power specifications and standards of the. Users in over 68 countries worldwide appreciate the ruggedness, dependability, design and lifespan of our power distribution boxes. The housing's edges protrude by 50 to 80 mm to protect.
