

What is a network security control cabinet

Overview

“A network cabinet is a metal shelter used for apprehending networking devices like routers, switches, patch panels and servers. ” Such enclosures assist you in systematizing as well as securing the crucial elements of a network infrastructure in a safe, secure, and efficient way. Different forms. Network cabinets are the backbone of modern IT infrastructure — organizing routers, switches, servers and wiring into secure, cool, manageable racks that enable scalability, efficiency, and hardware protection. Networks are fundamental to the operation, security and resilience of many organisations. The system is scalable, integrates with DCIM and BMS software, and supports electronic handles from popular cabinet access control manufacturers.
