

What is an SC fiber optic cold splice

Overview

SC stands for Subscriber Connector and is one of the most widely recognized fiber terminations in telecom. 5 mm ceramic ferrule within a rectangular body and a simple push-pull latch that provides a positive click when seated. A fiber fast connector, also known as a mechanical splice or cold connector, is a field-installable connector that terminates fiber optic cables without requiring a fusion splicer. It uses pre-installed index-matching gel or mechanical clamping to align the bare fiber with a short fiber stub inside. Fiber optic connectors are mechanical devices that join optical fibers with minimal signal loss, enabling high-speed data transmission. Key performance metrics include: Insertion Loss: ≤ 0.1 dB) Return Loss: ≥ 50 dB (APC connectors ≥ 60 dB) Durability: $\geq 1,000$ mating cycles without. Optical fiber terminations are the mechanical and optical interfaces that connect fiber cables to equipment, patch panels, and network hardware. They directly affect insertion loss, return loss, reliability, and long-term network stability. During assembly, no need glue dispensing and polish.
