

What is the box for storing indoor fiber optic cables called

Overview

A fiber terminal box, also known as a fiber distribution box, is a device used in fiber-optic communication networks to terminate, splice, and distribute optical fibers. It is a small enclosure that can house and protect the fiber optic cables, splices, and connectors. As networks expand and more homes and businesses require high-speed connectivity, skillfully installing and managing an FDB becomes essential knowledge for any. In broadband optical fiber access network, we often see the all kinds of fiber box such as fiber cabinet, fiber optic distribution box, fiber optic terminal box, multimedia box, and customer box. To ensure consistent performance and longevity, it is essential to adhere to strict technical specifications.
