

What is the white color of outdoor optical fiber cables

Overview

This white color is chosen for where the cable is used and for easy identification. The TIA-598-D standard defines a standardized color-coding system that engineers and technicians rely on to identify different types of fiber optic cables, connectors, and individual. Understanding fiber-optic color codes is essential for any technician tasked with installing, maintaining, or troubleshooting modern fiber networks. By adopting the TIA/EIA-598C standard, you gain a universal “language” of colors that speeds identification, reduces miswiring, and enhances safety. The outer jacket color quickly identifies the type of fiber inside. These codes ensure correct organization and connectivity during installation or maintenance processes. It is called “white fiber optic” because of the color of its outer jacket.
