

Which type of optical fiber cable is the cheapest

Overview

OM1 is the weakest, but most affordable of the fiber optic cable types, with a maximum bandwidth of 10 Gigabits per second at around 100ft. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. Connector types play a crucial role in selecting the right cable for specific applications, as different connectors are designed for various environments, space constraints, and high-bandwidth. Buyers typically pay for fiber optic cable by length, fiber type, and installation complexity. This guide presents ranges in USD and practical price estimates to help. This guide compares multimode cable prices across OM1-OM5 and explains what really moves the number: fiber grade, fiber count, jacket rating, and whether assemblies are factory-terminated.
