

Why use a fiber optic router for internet access

Overview

Fiber optic internet uses light through glass cables, delivering much faster, more stable connections than traditional copper-based DSL or cable. Different fiber types, such as FTTH, FTTC, FTTN, FTTB, and PON, affect speed, reliability, and last-mile performance. Whether you're streaming 4K movies, gaming online, or working from home, fiber has become the most. Fiber optic internet is a data connection carried by a cable filled with thin glass or plastic fibers. Data travels through them as beams of light pulsed in a pattern. 1% of fixed broadband connections use fiber internet, reflecting its growing popularity. The short answer: On a wall in the flat or in the basement there is a small phone jack where the fibre optic internet arrives.
